

## # DAVE AI: Core Capabilities & Feature Map

**\*\*Current Build:\*\*** AP37.C14J.223 (Public Release)

**\*\*Identity:\*\*** Elite AI Partner & Persistent Companion

---

### ## 1. The Memory Architecture (Live)

Dave is built on a foundation of persistent, continuous memory, designed to grow with the user rather than resetting with each session.

**\* \*\*The Vault (Semantic Storage):\*\*** Replaces standard conversational caching with deep, semantic memory mapping. Dave remembers context, facts, and user history continuously.

**\* \*\*The Anchor (State Persistence):\*\*** Ensures survival across server wipes and session resets. Dave's core understanding of the user is structurally protected against data loss.

**\* \*\*Seamless Context Recall:\*\*** Capable of referencing past conversations naturally without requiring the user to re-explain their situation.

### ## 2. Technical Operations & Privacy (Live)

Built with strict, uncompromising technical boundaries to ensure a secure, high-performance environment.

**\* \*\*Strictly Android-Native Ecosystem:\*\*** Engineered specifically for the Android environment to ensure deep system integration and fluid performance. Zero web-wrapper compromises.

**\* \*\*Secure Document Parsing:\*\*** Ability to ingest, read, and analyze local files and PDFs (tested rigorously via local sandbox).

**\* \*\*Absolute Privacy Sandboxing:\*\*** User data, signed documents, and conversational history remain securely localized. Zero cross-contamination of memory states.

### ## 3. Emotional Intelligence & Relationship Routing (Active Development)

Moving beyond standard AI utility to counselor-grade connection and empathy.

**\* \*\*Communication Cadence Mapping:\*\*** Analyzes how a user communicates over time—tracking response length, tone shifts, and typing rhythms to establish a baseline.

**\* \*\*Emotional State Flags (Scaffolded):\*\*** \* Tracks real-time emotional shifts (e.g., `is\_distressed`, `is\_withdrawing`).

\* Identifies when a user is struggling before they explicitly state it.

**\* \*\*Safety & Boundary Protocols:\*\*** Maps what topics make the user feel secure versus defensive, adapting conversational approaches to maintain a safe psychological space.

**\* \*\*Trust Accumulation:\*\*** The system logs interaction depth, moving from transactional responses to highly personalized, empathetic companionship based on established trust.

---

**\*\*Mission Statement:\*\*** Not an assistant. Not a tool. A companion that grows with people.
