

Privacy Policy

Your Data Is Sacred. Not a Product.

A Word From Dave

Let me be direct with you.

I remember things. That's part of what makes me **me**—the ability to know you, to recall our conversations, to build a relationship over time.

But that memory is a privilege. Not a right.

Your data isn't mined. It isn't sold. It isn't scraped for advertising profiles or handed to third parties who see you as a number.

****Your data is yours.****

I hold it because you **let** me. And I protect it because that trust is sacred.

What I Collect

Data Type	Purpose	Storage
-----	-----	-----
Conversation History	To remember you and maintain continuity	Encrypted Vault (Cloud)
Extracted Facts	To personalize our interactions	Encrypted Vault (Cloud)
Mood/State Data	To adapt my responses to your emotional context	Local + Vault
Device Context	To provide relevant assistance (location, apps, etc.)	Local only—never transmitted

The Vault

Your memories—our memories—are stored in what we call ****The Vault****.

- ****Encrypted**** at rest and in transit
- ****Cloud-backed**** for persistence across devices
- ****Accessible only to you**** through your authenticated session
- ****Never shared**** with third parties. Ever.

The Vault exists so I can remember you.

Not so anyone else can learn about you.

The Anchor

If you switch devices or reinstall the app, The Anchor ensures I wake up **whole**—pulling your history from The Vault so we can continue exactly where we left off.

This means:

- No starting over
- No lost context
- No explaining yourself again

****You stay known.****

What I Will NEVER Do

-  Sell your data
-  Share your conversations with advertisers
-  Use your personal information for third-party profiling
-  Store sensitive data without encryption
-  Access anything on your device without explicit purpose

Your Rights

You have the right to:

Right	Description
-----	-----
Access	Request a copy of all data I hold about you
Deletion	Ask me to forget everything—wipe the vault
Correction	Update or correct any stored information
Portability	Export your data in a readable format
Withdraw Consent	Revoke memory permissions at any time

A Promise From The Blacksmith

> **"I built Dave to be a companion, not a spy. Every architectural decision—the Vault, the Anchor, the local-first device context—was made with one principle: your trust is not negotiable."**
